

3 SIMPLE STEPS

to CallTower's Global PSTN (CCPP) for Webex Calling (VAR)

STEP 1

Estimate Quantity of Call Paths Required

STEP 2

Select Country and Quantity of DID/DDI Numbers Required

STEP 3

Email/Call CallTower Sales Support for Customer Pricing & Paperwork Total the number of Webex Calling seats and devices. Divide this number by 4 to get the estimated number of Call Paths required. Multiply the Call Paths by \$7.95 per Call Path to estimate monthly spend. For example, a 500 seat Webex Calling customer will typically need 125 Call Paths for incoming/outgoing PSTN calling activity. Estimated monthly, 125 x 7.95/month = 994 monthly plus usage and DID/DDI numbers.

Identify quantity of DID/DDI phone numbers per country, including active and spare/reserve DID/DDI numbers. Multiply quantity by per Country cost/DID/DDI to estimate monthly spend. For example, a 500 seat Webex Calling customer in the United States may have 500 active and 200 spare DID/DDI numbers. Estimated monthly, 700 x \$0.49/month = \$343 monthly.

To assist, CallTower's certified sales and engineering teams are on standby to assist you with design, pricing and contract paperwork. Feel free to call (800) 347-5444, or email us at sales@calltower.com.
